

ESCUELA TECNICO MAYA

Field Report #42 September 12-25, 2011

- From mud to plaster... the exterior facade of the Vo-Tech workshops changed dramatically with the application of the brown coat - a leveling layer of lime, sand, and hair (1,2,3)
- The solar shower walls were extended with aluminum cans to support a clear lamina roof (4)
- Structural mortar was added to form a quoin or masonry corner at the junction of workshop I and the east bodega (5)
- Exterior design work continued with the addition of a corn field and more mayan glyphs (6)
