

ESCUELA TECNICO MAYA

Field Report #43 September 26 - October 9, 2011

- Crew members sculpt rebar formwork for the Quetzal design that will be incorporated into the glass bottle wall of the Center Bodega (1)
- Aluminum cans & old car windshields were used to build fish tanks on the exterior of the Center Bodega. The rock detail on the wall will provide a cascade effect when rainfall supplies the tanks (2)
- Work continues on the exteriors, including cob sculptures (3,5) and the application of lime-based finishes (4)
